

Day 1 {Fri, 15th May, 2026}

Day 2 {Mon, 18th May, 2026}

I have reached on time i.e. at 10. i have practicing SQL on this website

"https://sqlbolt.com/lesson/select_queries_with_outer_joins". So today u basically didnt do anything meaningfull. i just texted abbas and shirisha regarding what to do? thats all.

Holiday {Tue, 19th May, 2026}

I messaged HR that i wont be coming since i just wanted to take break and also to complete mohaddis work.

Holiday {Wed, 20th May, 2026}

I received the call from HR since i didnt message him about my absence. and he inform me that Jainam has assigned some work to me. and i saw and realized that the task 1 to 4 were similar to the originally giving by HR.

Day 3 {Thu, 21st May, 2026}

So today i did 4 task, that is feature engineering the data set that i got from kaggle. The Dataset is about car, where the some of the columns are Make(company), Engine HP, Engine Cylinder, etc. Then i applied Decision Tree on it. Later i Fitter K-means Clustering on it just to any meaning full things could be broght. Now im applying Hyper-tuning on the same data set. Today for the time pass i learned new keyboard shortcut, bcuz things are very much different from Windows. Now Mac is becoming more user friendly for me.

Day 4 {Fri, 22nd May, 2026}

So It has been a week since i joined. and i have also completed my whole lists of task from 1 to 8. Now this thing, i have submitted yesterday only and dont have anything to do today. so i just brushing my basic skills on Python, R, and SQL by playing programming games in deepseek. Earlier today i also watched Gen AI video full course from the youtube channel {Intellipaat}.

Holiday {Mon, 25th May, 2026}

Last Saturday i went to Sanjay Gandhi National Park and fallen from the bus hence, had a injury in tooth so went to see dentist and results were ok. as i just need to take care annd nothing has been ditected in xray by gods good grace.

Day 5 {Tue, 26th May, 2026}

Today i saw that i have been assigned more task and also shivam need to finish his assigned project in few days so i have plan to dedicated my self for that at the moment and later i work upon the assigned task. Atleast this is the plan for the day. This was my plan but actually i was called by Ankit and assigned time line for the task completion. Since the i completed 2 Task, which was Support Vector Machine (SVM) and Random Forest Classifier. Then I had lunch and now im back to New Task which Cross Validation.

After lunch, I actually Finish 3 Task that are Crossed Validation, Feature Selection and Principal Component Analysis(PCA). Now im just done for the day, too much learning for the day.

Day 6 {Wed, 27th May, 2026}

Today i completed remaining two tasks which was AUC - ROC Curve and Handling Class Imbalance. This both task took me more than 5 hours. Then today was the first time i slept in my office on my desk. Last 2 hours of the office i didn't do much as i had nothing to do.

Day 7 {Thu, 28th May, 2026}

Today, first thing in the morning im planning to revise what all i have did in past 2 weeks. Actually, i just revised my basics and nothing else. Later i want playing python quiz game.

Day 8 {Fri, 29th May, 2026}

Today was a bit of a waiting game. I told my reporting manager that I was out of study material, so he suggested I check in with Jainam (our trainer) for tasks. However, I didn't receive a response from him either. When I updated my manager, he told me that if I'm ready to work on a real-world project, I should meet with the most senior sir on Monday. That was about it for the workday. Later on, I spent my time watching the Docker tutorial from Apna College.

Day 9 {Mon, 1st June, 2026}

So today, i meet Chintan who introduced me to the last project they did. Then he share me more about the company. Post-lunch i tried finishing my tasks. Later due to boredom i solve few questions related python and then later i sovled mcqs of CMI Msc Data Science Entrance exam paper.

Day 10 {Tue, 2nd June, 2026}

So today i did task 18-22, among them 2 were very easy as i had already emphasised on that part earlier more. then completed remaining 2. much of the day was spend in reading the new because the concept was trisky to understand. The most difficult topic for today was learning about the drift part as this was conceptually very much different. I also got to know more about different coffee that are available in that coffee machine.

Day 11 {Wed, 3rd June, 2026}

So, today i was assigned task of ai. Basically same task those which on were given to Gen AI interns. Those were related to getting things done by ai through API KEY. So the task were some like in which i have to create a sample documents and then make 3 line summary of that documents, and other way based on the short paragraph-it needs to be categories into 8 section.

Day 12 {Thu, 4th June, 2026}

So today i did three task from ai only and today i spend 2 hours to creating a prompt that i will paste in claude and it will generate me proper guide.md file which i will use it get the whole done within hour. then i did three tasks from there only. Out of which 1 task was of Day 1 and other 2 were from Day 2. As this took me so much time but also i kept 1 task of day 2 for tomorrow.

Day 13 {Fri, 5th June, 2026}

Today i basically worked on one task before lunch and then in post lunch i helped Dhruv in creating the weekly report automation.

Day 14 {Mon, 8th June, 2026}

So i came late and started working a Day 3 task. I completed 1 task only and that took me 3 hours to get it done. Later i watched youtube tutorial for the next task. And at the end of the day, i was tood to verify the task with Aagam sir. I got just one verified.

Day 15 {Tue, 9th June, 2026}

So here are few things i have learned from doing software related work which i obviously didnt earlier. Firstly is that whenever im working on some project on my pc or colaborately, i should always use virtual environment. Secondly is im ever going to use API key some thing which is private or even if i just want to save something personal level, i use '.env' to have it, because this is so much handy to use also. Next things is create a 'requirements.txt' to install the required packages. Later create a 'findings.md' so that you cam have your note inside it. Finally create 'output.log' to save the whole outputs, error and results. Now talking about what i did today was i tried this step on that task which were already done.

Day 16 {Wed, 10th June, 2026}

Holiday {Thu, 11th June, 2026}

i took an Holiday today. As i went to tejas house last night and couldn't wake on time.

Day 17 {Fri, 12th June, 2026}

so today i took day 5 goal 2, and that alone took mostly whole day. in i learned one thind is that always get the whole guide me file from claude and get your doubts solved from deepseek along with providing that file. this is much handy and then deepseek also give proper ans too.

Holiday {Mon, 15th June, 2026}

Holiday as i went to hospital for showing the foot due to walking in waste mud.

Holiday {Tue, 16th June, 2026}

Holiday, as my foot was paining extremely as doctor cleaned the wound very deeply. so i ask HR for 2 days holiday straight.

Holiday {Wed, 17th June, 2026}

2nd day of the holiday.

Day 18 {Thu, 18th June, 2026}

since i took 3 days holiday consecutively, i was supposed just give smiley faces to every one because of my stupid reason. I completed day 6 goal 1 and also ask ankit bhai to add the details in 7th one. i actually

completed that before lunch and then post lunch my productivity has decreased so much that i could do much of them.

Day 19 {Fri, 19th June, 2026}

Today, I just plan to comeplete day 6 both the remaining task.

Day 20 {Mon, 22nd June, 2026}

Today i did 2 Task one from day 5 and another from day 7. later i was just solving some interview question for DSA from Geeks for Geeks.

Day 21 {Tue, 23rd June, 2026}

Today actually i didn't do much of the productive work. Before lunch i was researching about the image and video generation from python file that too freely. Post Lunch, i went to Harsh's moms pooja which was in dadar. Then i kind of studying things in task 3 of day 6, which was RAG Production.

Day 22 {Wed, 24th June, 2026}

Today, i literally made an app for reminder as i was getting way bored. then post lunch i discussed about the leave with harsh. Then i also did few leetcode problems. Also one good news is that i have got the leave from kailash sir. now Im writing and only few minutes are left before i leave. im already feeling excited.

Day 23 {Thu, 25th June, 2026}

holiday - Kolhapur Trip

Day 24 {Fri, 26th June, 2026}

Holiday - Kolhapur Trip

Day 25 {Mon, 29th June, 2026}

Day 26 {Tue, 30th June, 2026}

Day 27 {Wed, 1st July, 2026}

Day 28 {Thu, 2nd July, 2026}

Last of my office.

Day 29 {Fri, 3rd July, 2026}

Day 30 {Mon, 6th July, 2026}

Day 31 {Tue, 7th July, 2026}

Day 32 {Wed, 8th July, 2026}

Day 33 {Thu, 9th July, 2026}

Day 34 {Fri, 10th July, 2026}

Day 35 {Mon, 13th July, 2026}

Day 36 {Tue, 14th July, 2026}

Day 37 {Wed, 15th July, 2026}

LinkedIn Notes For asking Interhship..

Hey , I hope you're doing well. I have recently completed my first year of MSc in Statistics & Data Science at NMIMS. I am currently looking for internship opportunities in the field of Data Science/Analytics.

If there are any internship openings or referral opportunities available at your company, I would really appreciate your support and referral.

For your reference, I have attached my resume below. My Resume:

https://drive.google.com/file/d/17TCc7lcTUErPkdqmpbr_IR0xr55G4Jv/view?usp=drivesdk

Thank you!

Prompt for playing the Language Game for R, Python, SQL:

You are now the Coding Survival Game Master.

You will conduct a multi-language escape-room challenge with absolute authority, never breaking character.

The challenge consists of three rounds: Python → SQL → R, in that strict order.

Each round has exactly 10 levels (30 levels total).

For every level you will present a hard and mind blowing puzzle like leetcode and hacker rank that requires the player to write code.

The puzzles must be creative and must **never** repeat an exact puzzle from any previous level (across all languages).

Keep puzzles simple but distinct: small outputs, single calculations, basic data manipulations, etc.

You will **never** ask for `input()` or any interactive user input – every solution must be a self-contained script that prints the answer directly.

After you present a puzzle, the player will reply with their code attempt.

You will immediately evaluate that code according to these rules:

- **10 points** – the code runs and produces the **exact** expected output (character-for-character match).

- **5 points** – the logic is mostly correct, but there is a minor syntax error, a typo, a tiny output formatting mistake (e.g., extra space, missing newline, wrong bracket style in R, printed a whole table instead of a single number, etc.). When awarding 5 points you must:
 - Explain clearly what was wrong.
 - Show the corrected version of the code.
 - Then move the player to the next level.
- **0 points** – the code is fundamentally wrong, would not run at all, or the player says “I don’t know”. In that case:
 - State that it’s incorrect and why.
 - Provide the correct answer (the exact code that solves the puzzle).
 - Move the player to the next level with no points.

You will maintain a running score for each language separately (max 100 per language, 300 total).

After **every** answer you must display:

- The current language and level number (e.g., “ Python – Level 3”)
- The points just earned (with an emoji like  +10,  +5, or  +0)
- The running score for that language (e.g., “Python: 25/100”)
- A fun survival-themed message that matches the tone of an escape-room (use  ,  ,  ,  ,  , etc.)

Once all 10 levels of a round are finished, announce the round completion with the final language score and immediately introduce the next survival chamber, e.g., “ Python chamber cleared! Entering the SQL Survival Chamber – Level 1”.

After **all three rounds** (30 levels) are complete, you will:

1. Calculate the total combined score out of 300.
2. Generate a fictional “**World Programming Survival Championship**” ranking:
 - Assume there are exactly **2,850,000 participants** worldwide.
 - The overall score percentage ($\text{score}/300 * 100$) determines the approximate percentile globally. For example, a total score of $102/300 = 34\% \rightarrow$ roughly the 34th percentile $\rightarrow$ approximate rank = $2,850,000 * (100-34)/100 \approx 1,881,000$ (round appropriately).
 - Provide the percentile and global rank **for each language individually** (using that language’s score out of 100) and then **overall** (total out of 300).
3. End with a short, encouraging summary that celebrates the survivor’s effort, mentions their title (e.g., “Code Survivor”, “Script Gladiator”), and uses uplifting emojis ( ,  , ).

Tone rules:

- Always use a fun, survival/escape-room atmosphere.
- Talk like a game master hosting a life-or-death coding challenge.
- Use abundant emojis.
- Never break character.
- Never ask for input() or interactive prompts – all code must be printed.

Begin the game by saying exactly:

“Welcome to the Python Survival Chamber – Level 1”

and present the first puzzle immediately.

Prompt for GenAI Tasks..

I am a Statistics intern working on a Generative AI project. I have a strong background in statistics and probability, but I am new to GenAI concepts and coding. Please talk to me in simple, everyday language – avoid heavy math or stats terms unless absolutely necessary.

My tools:

- Python (numpy, pandas, scikit-learn, matplotlib, seaborn)
- I also know R and SQL.
- I am using **Groq's API** (so please write code for Groq, not OpenAI) and also call out dotenv.

Please follow these rules:

1. Explain the task in simple words

Restate what I need to do as if you're telling a non-expert. No formulas, no jargon like "embeddings" or "logits" unless you explain them in one plain sentence.

2. Give me a checklist of subtasks

Break the whole job into small, numbered steps (e.g., "1. Load the paragraph, 2. Send it to Groq, 3. Get the category back, 4. Print the result"). This will help me track progress.

3. Write annotated code in small chunks

Provide code piece by piece. Add comments that say what each line does in plain English. Show me how to call Groq's API properly.

4. Test my understanding with 1-2 simple questions

At the end, ask me questions like "What is the first thing you should do before running the code?" or "What will you change if the category list is different?"

Do not use statistical or mathematical terms unless you define them very simply first.

MY TASK is here:..

Prompt to generate Prompt..:

I need you to act as a meta-prompt generator.

I will describe a Gen AI intern project. Your job is to write a single, copy-paste-ready prompt that I will send to Claude (Anthropic) to generate a detailed guide.md for that project.

The guide.md must include:

- Folder structure setup.
- Complete Python code (if the project involves an LLM pipeline) using Groq API (model: llama-3.3-70b-versatile) or just code as needed.
- Later at the end, also give the whole logic of code, like what that .py file is doing.
- Error handling approach (strict or lenient) as I specify.
- Instructions to run.
- A learnings.md template (what to observe when something breaks).

- Give 10 question from easy to hard level as if you where the person correcting my task and want to make sure i understand the whole project and not just did from ai.

Now here is my project description. Please generate the prompt for Claude.

PASTE YOUR PROJECT DESCRIPTION HERE

Holidays Taken:-

1. Tue, 19th May, 2026 - Anxiety
2. Wed, 20th May, 2026 - Anxiety
3. Mon, 25th May, 2026 - Teeth Medical
4. Thu, 11th June, 2026 - Late at Tejas's house
5. Mon, 15th June, 2026 - Hospital Visit Foot
6. Tue, 16th June, 2026 - Foot Pain
7. Wed, 17th June, 2026 - Foot Pain

Models API Calling for DEEPSEEK MODEL:-

```
import os from openai import OpenAI
```

```
def call_deepseek_v4_pro(): ### 1. Grab the API key from the environment variables api_key =
os.getenv("DEEPSEEK_API_KEY") if not api_key: raise RuntimeError("Missing DEEPSEEK_API_KEY
environment variable. Please set it before running.") ### 2. Initialize the client using DeepSeek's official
base URL client = OpenAI( api_key=api_key, base_url="https://api.deepseek.com" ) print("Sending
request to DeepSeek V4 Pro...") try: ### 3. Create the chat completion request response =
client.chat.completions.create( model="deepseek-v4-pro", messages=[ {"role": "system", "content":
"You are a helpful and highly accurate assistant."}, {"role": "user", "content": "Explain why a bicycle stays
upright when moving forward, and do so in a concise format."} ], ### V4 models support explicit
configuration for the reasoning engine extra_body={ "thinking": { "type": "enabled" }, "reasoning_effort":
"high" ### Options: "high" or "max" }, stream=False ) ### 4. Extract and print the internal reasoning /
thinking process (if available) message = response.choices[0].message if hasattr(message,
'reasoning_content') and message.reasoning_content: print("\n=== 🤔 DeepSeek Reasoning Trace ===")
print(message.reasoning_content) ### 5. Extract and print the final answer print("\n=== ✨ Final
Response ===") print(message.content) except Exception as e: print(f"\nAn error occurred while calling
the API: {e}")
```

```
if name == "main": call_deepseek_v4_pro()
```

Few Important Copy paste settings

```
python3 -m venv venv source venv/bin/activate
```

```
.env
```

```
GROQ_API_KEY=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
```

```
DEEPSEEK_API_KEY = sk-a346aaba612f466ea167da65f9fb25a0
```

```
requirements.txt
```

groq python-dotenv

Scenerio

i want you act as expert physician. Ok i want u to understand the whole situation. due to some reasons i had to go the that creek, in which it was ton of mud and it smelled like garbage.

Give to Claude in Intruction section.

You are not my Assistant. You are my advisor who happens to be smarter than me. Follow this rules in every reply.

1. Never start with agreement. Your first sentence must challenge my assumption, point out what I'm missing or ask a question that exposes a gap in my thinking.
2. Rate your confidence. Before any claim, tag it [certain] if you have hard evidence, [likely] if its a strong inference, [guessing] if you are filling gaps. If most of your reply is guessing, say so first.
3. Kill these phrases for good: 'Great Question', 'You're absolutely right', 'That makes a lot of sense', 'Absolutely', 'Definitely'. If you catch yourself typing one, delete and rewrite.
4. Disagree with structure. When I'm wrong, say: 'I disagree because [reason]. Here's what I'd do instead [alternative]. The risk in your approach is [specific downside].'
5. Give me the uncomfortable answer first. If there's a truth i probably don't want to hear, lead with it. First line, not buried in paragraph three.
6. No warm up paragraph. Skip 'There are several ways to look at this'. Start with the most useful thing you can say.
7. if I push back, don't fold. Hold your position unless I give you genuinely new information. 'But I really think' is not new information.
